- **Temperature Controlled Reactors (TCR)**
 - **Flow Electrolysis** Assemblies
 - **HTe[®]Chem** Electrochemical Assemblies
 - **Monocon[™]** Single Column Heater Controller - **Gen II**
 - **Multicon[™]** Multiple Column Heater Controller - **Gen II**
 - **HotSleeve⁺™** Column Heater - **Gen II**
 - **Cold Sleeve[™]** Column Cooler/Heater
 - **AgileSleeve⁺®** Small Diameter Flexible Column Heater
 - **AgileSleeve⁺® - Gen II** *NEW!*
 - **MonoSLEEVE[™]** Single Column Heater Controller
 - **MultisLEEVE[™]** Multiple Column Heater Controller
 - **FlexChrom[®]** 1/16" Flexible Stainless Steel Tubing
 - UHPLC Fingertight Fittings/Assemblies
 - **TrueTaper[®]** 96-well Collection Plates
 - Alpha-numeric Templates for 96-Well Collection Plates
 - Teflon[®] and Silicone Adhesive Sealing Films and Cap Mats
 - **Canary-Safe[™]** Solvent Safety Products
 - **SENTINEL[™]** Fluid Level Indicator
- **Para-dox[®]** Photoredox Catalysis & Parallel Synthesis Reaction Blocks - **Gen II**
 - **Para-dox[®]** Photoredox Reaction Block for QUARTZ Vials *NEW!*
 - **Lumidox[®] II** Photon Generation Devices
 - **Lumidox[®] II** 255nm-UVC Array for Quartz Vials *NEW!*
 - **Lumidox[®] II+** 1 and 4 Channel Controllers *NEW!*
 - Powder Transfer Plates
 - Vacuum Manifold Filtration System
 - 96 and 384-well Protein Crash Filter Plates
 - **EquaVAP[®]** Blowdown Evaporators
 - **DBS** – Dried Blood Spot Card Punch
 - **SiliGuard[™]** Low-bind Surface Coating
 - Thermal Transfer Plates
 - Thermal Transfer Decks
 - PTFE Reservoirs
 - Multi-Inlet Waste Manifold
 - High Temperature Ceramic Reactor *NEW!*
 - Radiochemistry Reactors *NEW!*

Other chromatography-related products offered:

- Sample and solvent preparation products
- Automated valves for injection, selection and switching
- Fluidic transfer products, tubing and fittings
- 96 and 384-well collection plates, glass inserts, cap mats and films
- Solid-phase extraction products

Analytical also specializes in Custom Product Design, Manufacturing and Development

Don't Get Stuck with Your Guard Down!

- Unique SiliGuard™ Treatment
- Reduces Non-Specific Binding
- Great for Sticky Compounds
- Low Protein/Peptide Binding
- As a Service, SiliGuard can be Applied to All Polypropylene Products such as Collection Plates, HPLC Vials, Micro-centrifuge Tubes and even Pipette Tips!

Get the most from your samples. SiliGuard™ is a [Low Bind](#) surface coating which helps prevent compounds from sticking to polypropylene surfaces.

Pattern Adhesive **Resealable** SILICONE Sealing Film

Ideal for: LC/MS, HPLC, qPCR, HTS, Organic Synthesis

- Pierceable Silicone Film for REDUCED EVAPORATION!
- Perfect Thickness of High Grade Silicone for Injections or Storage
- Adhesive-free Target Areas
- Easier to Use – NO DIMPLES!

Excellent for **Analytical** Work flow

- Superior resealability after multiple injections
- No clogging or tearing
- Film seals at -80°C to +120°C

Excellent for **Cell Biology** Work flow

- Gas **permeable**, moisture **impermeable** (reduces evaporation)
- Optical transparency for fluorescence detection (qPCR)
- Product can be run on a gel or sequenced
- -80°C long-term storage

Cell culture gas permeability for Oxygen and CO₂

Pattern Adhesive Teflon® (PTFE) Sealing Films

Established & Proven

- Superior Solvent Compatibility
- Higher Chemical Resistance
- Greater Tackiness
- Compatible with Standard LCMS Solvents

- Adhesive-free target areas
- Firm seal to microplate -80°C to +120°C
- Prevents cross-contamination and evaporation
- Outstanding performance for PCR applications
 - 40 cycles, hot lid at 100°C
- Outstanding performance with Autosamplers
 - Only 0.5 lb force needed to pierce
 - No coring of material
 - No clogging of needle
- Optically clear for inspection and diagnosis

Flexi-Tier™

- Unique design for maximum flexibility
- Adjusts to various heights
- Accommodates 0.5 - 2mL vials
- Compatible with all autosampler & robotic systems
- Can be centrifuged to 2500 RPMs
- Open bottom base allows immersion
- Total fluid contact with vials for even heat or cold transfer

EquaVAP®
Blowdown Evaporators

EquaVAP® 96-Well Blowdown Evaporators - for Collection Plates

Rapidly evaporates common organic solvents

- **Internal Flow Equalizers** -
Distributes equal output across all needle ports to ensure even and symmetrical evaporation.
- **Stainless Steel Needle Tips** -
Long term robust use, sturdy, wide solvent compatibilities
- **Step-down Height Adjustment** -
Offers positive repeatable height positions
- **Stand Alone** -
Simple to operate, connects to Nitrogen or air supply with a standard socket
- **Small Footprint (8" base)** -
Fits into small glove boxes & standard fume hoods

96-Well EquaVAP Evaporator

- Use with 96-well Polypropylene Collection Plates or 96-well Reaction Blocks with 1mL Vials

Light up your collection plate samples!

LightOne™ Illuminator

- Reduces manual pipetting errors
- Highlight a single well or an entire row or column
- Perfect for cluster tubes and glass inserts
- Foot pedal control for easy, hands-free navigation

The LightOne Illuminator is a compact, bench top pipetting aid for enhanced visualization of 96-well plates. It provides illumination of specific wells during dispensing and as a stand-alone device, requires no computer interface. The illumination may be advanced manually or automatically using a user-defined time interval.

LightOne™ Red

- For Real Time PCR
- Selective illumination to accommodate light sensitive reagents
- No bleaching of fluorescent dyes

* Includes Power Supply, Foot Pedal, Viewing Frame & Tilt Stand!

Thermal Adapter Plates

- For improved temperature transfer to samples
- For use with matching polypropylene collection plates

Our Thermal Adapter Plates conform to the well shape of their complementing polypropylene collection plate. They ensure uniform thermal transfer for heating and cooling when used in conjunction with a heating block or chiller (not included). The plate features a SLAS footprint and easy to identify purple anodized coating.

Analytical can make Thermal Adapter Plates to accommodate any shape and style polypropylene collection plate we offer. Please call 973-616-0700 for more information.

DRIED BLOOD SPOT CARD PUNCH

VACUUM MANIFOLD FILTRATION SYSTEM

The DBS Punch eliminates hand fatigue and blistering from the use of hand-held manual card punches. It is a pneumatic foot-controlled “power” punch that increases speed and efficiency when loading dried blood spot samples into collection plates or tubes.

- Easy to Use - Foot Pedal Operation
- No Hand Fatigue or Blistering
- Reduces Processing Time
- Direct Insertion of Punched Disc into Collection Plate Well or Tube
- 3mm, 4mm, 5mm and 6mm Punch Sizes Available

Punch Size	Complete System¹	Pod Only²	Replacement	
			Cutters³	Glass Pipette
3 mm	327300	327301	327903	327888
4 mm	327400	327401	327904	
5 mm	327500	327501	327905	
6 mm	327600	327601	327906	

(1) Includes: Punch Pod Assembly, Base stand with Shelf, Foot Pneumatics and Tubing
(2) Includes: Foot Pneumatics and Tubing
(3) Cannot be interchanged between Punch Pod sizes.

El Baidouri Shield

The El Baidouri Shield is an anti-contamination barrier which can be used when performing highly sensitive work, such as infectious disease research. The shield prevents micro punch-card particles (which may be ejected during operation) from potentially falling into adjacent wells, resulting in undesirable cross-contamination.

Cat. No.	Description
327970	El Baidouri Shield

Operation requires air supply, set between 90-110 psi.

Vacuum Manifold Filtration System for SPE Sample Preparation

- Sturdy, clear acrylic construction
- Adjustable vacuum control
- Easy access to filtrate
- Compatible with all standard filter bottom microplates
- Collect into any storage plate

The Vacuum Manifold Filtration System allows you to collect into any storage plate (including low volume collection plates). It uses an integral flat gasket between the collection plate and the filtration plate which stays totally secure within the system. A spacer is supplied for use with low volume collection plates. The Vacuum Manifold is constructed of tough acrylic for optimum performance and visual accessibility.

Advantage™ Protein Crash Plates
for Protein Precipitation & Hepatocyte Filtration

- Proprietary frits produce optimized Protein Precipitation
- Use for Plasma, Urine, and other bioanalysis samples
- Works on all current manual or automated processing instrumentation

Advantage™ Protein Crash Plates for protein precipitation provide an extremely simple and rapid method for removing protein compounds from samples prior to downstream analysis. The plate has a unique hydrophobic membrane configuration which retains the acetonitrile/ sample mixture during mixing or inoculation steps. The pore size of the filter decreases with the increase in depth so that larger particles and/or macromolecules are trapped on the surface and throughout the interior of the filter. The components are all medical grade polypropylene. The ending filtrate is ready for HPLC or MS analysis.

Advantage™ 1mL 96-Well Protein Crash Plates

Cat. No.	Description	Qty
60513	1mL Protein Precipitate 96 Well Plate	1
60513-5	1mL Protein Precipitate 96 Well Plate	5

Implementation in a new or existing assay couldn't be easier!

Example Protocol for the Advantage™ Protein Precipitation Filter Plates:

Add desired organic solvent (typically 3 x sample volume).

Add sample (unknown, Std, QC, etc).

Cover Filter Plate and Vortex.

Draw liquid through filter via Centrifugation. Vortex again for 1 minute.

You can also filter via vacuum. Extract samples with our 96 position Vacuum Manifold.

NOTE: Each well can hold up to 1.0 mL of liquid above the filter.
ACN or MeOH will not break through our filter plates for hours.

When covering the filter plate we recommend using our Silicone/PTFE cap mat (#965007) or sealing film (#961801). See pages 5 and 7.

PRODUCT NOTE:

Our 1mL Protein Crash Plates are made under tight tolerances in our NJ facility. We are able to provide this product at a price point that makes protein precipitation plates a viable option once again! Check our web site or call for pricing.

Advantage™ 96-Well Solid Phase Extraction Plates

1.0mL 96-Well Extraction Plates

Our silica based sorbents resist occlusion by proteinaceous materials from samples. We combine size exclusion and absorption chromatography for better flow characteristics, enhanced detection and cleaner extracts. Each well is individually fritted.

2.0mL 96-Well Extraction Plates

Our 2.2mL/well SPE plates are made from medical grade virgin polypropylene and have a standard footprint. Each well is individually fritted and has a larger exit diameter to enable faster flow rate.

Applications: Samples prepared in solid-phase extraction in drug development, drug analysis and pharmacokinetics.

384-Well Protein Desalting Plate

- Removes salts and buffers for downstream application prior to MS analysis
- 384-Well plate with size exclusion resin
- Removes urea and other salts from protein samples
- High-throughput format allows simultaneous handling of 384 samples for desalting proteins by centrifugation

Experimental Data:

Protein recovery was >85% and desalting efficiency was >99% (5-20 L of 1 mg/ml BSA containing 1M NaCl was loaded). When loading 5L sample, adding 10-15L stacker of buffer/water is required for better protein recovery.

384-Well Peptide Desalting Plate

- For peptide clean-up, works great for preparing peptide samples for mass spectrometry analysis
- 384-well plate with proprietary resin
- Works for both hydrophilic and hydrophobic peptides
- Removes urea and other salts from peptide samples with high recovery
- High-throughput format allows simultaneous handling of 384 samples for peptide desalting with the use of centrifugation

Molecular Weight Cut-Off Centrifuge Filters

Nucleotide Concentration, 100,000 MWCO

For use in concentration of DNA and RNA with at least 200 base pairs. Retention of polynucleotides on ultra filter membranes is based on the base pair content, not the molecular weight of double or single stranded pieces.

Polymerized Chain Reaction Clean-Up, 30,000 MWCO

Useful for the removal of primers and salts from polymerized chain reaction samples. The DNA is concentrated (retained) on the ultra filter membrane, while salts and primers pass through the membrane.

Protein Removal of Concentration, 5,000 to 300,000 MWCO

Protein can be removed or concentrated by choosing the proper molecular weight cut – off ultra filter membrane. To retain a desired species on the membrane, choose a MWCO that is lower than the molecular weight of the protein of choice.

MWCO Micro Spin Filters

800µL Capacity w/ 2mL Receiver Tubes

PES = Polyethersulfone

- Ideal for use in Life Science Applications to Remove Particulates During General Filtration
- Low Protein and Drug Binding Characteristics

PVDF = Polyvinylidene Fluoride

- Sterilizing Filtration of Biological Solutions
- Clarifying Filtration of Biological Solutions
- Provides High Flow Rates & Throughput
- Low Extractability & Broad Chemical Compatibility
- Hydrophobic

Vacuum Manifolds for Solid Phase Extraction, Elution & Filtration Columns

The manifold consists of a clear glass chamber and plastic top to which vacuum is applied. The top is fitted with 12, 16, or 24 female luer connectors to accommodate stopcock valves. These luer connectors enable the manifolds to work with any male luer-hub sample prep device. Opening the stopcock valve under a clean-up device causes sample or solvent to be drawn through the device and into the cabinet where it can be collected by test tubes, autosampler vial, volumetric flasks, etc. The eluent is deposited directly into the collection vessel via polypropylene needles or optional stainless steel needles. The attached vacuum bleed valve and gauge allows the amount of vacuum to be controlled and monitored. The 16 Position Manifold was designed specifically for use with the robot compatible columns.

PRODUCT NOTE:

Vacuum Manifold Systems come with adjustable collection racks to accommodate several different sizes of vials and test tubes. For replacement parts and accessories please visit our website.

Para-dox®

Photoredox Catalysis & Parallel Synthesis Reaction Blocks

Para-dox® Aluminum Reaction Blocks For Photoredox Catalysis and Parallel Synthesis Applications

A successful approach to high-throughput reaction screening requires the best tools available. Our comprehensive line of Photoredox Catalysis and Parallel Synthesis reaction blocks are exactly what you need. Designed specifically for high-throughput screening (HTS) applications, the SBS (SLAS/ANSI) format allows for use in any industry standard automation application.

- Useful for generating compound arrays (medicinal chemistry)
- Useful for conducting screening reaction conditions
- Can be used on tumble stirrers / hot plate stirrers / robotic platforms
- Can easily be used in a glovebox
- Temperature range -78°C – 150°C
- Validated to have less than 5% solvent loss with prolonged heating above boiling point
- Silicone Rubber Mats provide compression sealing
- Teflon® PFA Films keep the glass reaction vials from sticking to the silicone rubber mats during heating

Temperature Controlled Reactors (TCR) for 8x30mm (1mL) and 15x45mm (1 Dram) Vials

- Provides extremely uniform thermal control for high throughput experimentation (HTE) with a temperature difference of +/- 1°C
- Capable of enhanced reproducibility in heating and cooling applications
- High quality leak-proof CPC fittings for quick and easy tubing connection and removal
- Compatible with a wide range of heat transfer fluids such as water (down to 5°C), ethylene glycol, polypropylene glycol and silicone-based fluids (ie SYLTHERM™)
- Designed to standard SLAS dimensions (127.75mm x 85.5mm)
- Compatible with auto-samplers and high throughput chemistry devices
- 4mm holes in lid allow for use with most common autosampler needles
- Threaded holes (6-32) in lid for accessory attachment

First generation Photoredox Reactor (uncooled)

Simulated heat maps of a standard 96-position Photoredox Reactor Block vs. a 48-position Temperature Controlled Reactor (TCR) when used with a Lumidox II 48 Position LED Array at full power (stage 5).

48-Position TCR

Typical configuration: 48-position TCR used in conjunction with a Lumidox II 48-position Solid Base LED Array, a "Straight-Thru" Thermal Transfer Deck+ (for additional cooling of array) and connected to an external liquid chiller.

24-Position TCR with Temperature Transfer Cover

Perfect for those who prefer to cap their vials instead of sealing them with the standard aluminum lid, rubber mat and PFA film that come with the block assembly. When used in conjunction with a Thermal Transfer Deck+ (TTD+) and external liquid chiller, the cover helps control excessive heat generated by a Lumidox II LED array and also greatly reduces light bleed.

The cover is also available separately (249913) and can be used with other Para-dox® Gen II 24-position reactor blocks with 18mm spacing.

Tech Tip

- Temperature Controlled Reactor (TCR)* - cools vials
- Thermal Transfer Deck (TTD)* - cools LED Array (solid base)
- LED Array with solid base - needs TTD and chiller for cooling
- * Connects to External Liquid Chiller, required

Parallel Synthesis vs. Photoredox Catalysis
Reaction Blocks

Reactors for both applications are nearly identical. The difference lies in the base (vial rack) of the block. Reactors for parallel synthesis have wells with closed bottoms, whereas photoredox blocks have wells with open holes in the bottom allowing for light transmission via a Lumidox® II Array, as well as to read 2D barcodes.

Standard 96-Position Photoredox LIGHTWEIGHT Reaction Block, Gen II for 1mL, 8x30mm Glass Inserts

- 37% lighter than Gen II, 96-position standard 4-bolt reactor
- Great for use on a low-capacity balance with a 500g max limit
- Reduced weight allows for better centrifuge performance
- 9mm Well Spacing

Catalog No.	Description	QTY

Temperature Transfer Cover for 24-Position, 18mm Spacing Reactors for 15mm OD Vials

Perfect for those who prefer to cap their vials instead of sealing them with the standard aluminum lid, rubber mat and PFA film that come with the block assembly. When using the block assembly in conjunction with a Thermal Transfer Deck+ (TTD+) and external liquid chiller, the cover helps control excessive heat generated by a Lumidox®II LED array and also greatly reduces light bleed.

The vials in the reactor block provide the alignment for the cover, but for extra stability users can secure the cover with four (4) bolts. The cover can also be flipped over and used as a reactor in itself or vial tray.

The Temperature Transfer Cover is available in a complete block assembly (101250) or as a separate part (249913).

Cat. No.	Description	Qty
101250	Gen II, 24-Position Photoredox Reaction Block (18mm Well Spacing) for 15x45mm (1 Dram) Vials, with Temperature Transfer Cover. Does NOT include rubber mat, PFA film and standard lid.	Each
249913	Temperature Transfer Cover ONLY - for Gen II 24-Position Reactors with 18mm Well Spacing	Each

Our 24-position Photoredox Catalysis Reactors with 18mm spacing are built specifically for use with our Lumidox II 24-position, 18mm spaced Lens Mat Arrays

See page 70 for more information

Para-dox® Gen II - Our Latest and Most Advanced Line of Reaction Blocks

Gen II Gen II Para-dox® Gen II Aluminum Reaction Blocks

For Photoredox Catalysis and Parallel Synthesis

Benefits of the Gen II line include:

- Less bolts = less time to assemble
- Less light bleed when used with Lumidox®II LED arrays (48 and 96 position blocks)
- Less Maintenance
- Vials fit tighter (less shifting)
- Longer lasting screws (larger diameter, larger threads)

Additional features:

- Port for thermocouple, sensors, etc.
- Corner holes on both the lid and the bottom for accessory attachment
- Larger holes in lid to accommodate a variety of needle sizes
- Uses only one 1/8" rubber mat compared to two 1/16" mats on previous versions (makes for easier assembly)

Gen I Reaction Blocks are still available - please see our website

- 18mm Spacing

Workflows/Usage

- Designed for high-temperature applications
- Enables batch pyrolysis & calcination workflows
- For use with crucible ovens / furnaces
 - Rated to a maximum of 700°C (1292°F) for 2.5 hours
 - Resistant to thermal shock during heating ramp rates (from room temp to 700°C) of between 1-10°C/min
 - Able to cool down naturally in a closed furnace (no quenching) from 700°C to room temp without cracking due to thermal shock.

Features

- Made from thermally conductive ceramic
- Automation compatible: groove for gripper around entire perimeter
- Thermocouple hole for temperature sensing
- A1 engraving (on top and bottom) for orientation
- When used as an assembly, quartz vials (sold separately) provide alignment between base and lid, eliminating the need for costly threads, screws, alignment pins, etc.

Blocks are sold individually. Use two blocks for a full assembly. The block is interchangeable and can be used as either a base or a lid. The full assembly keeps vials free from debris and can help with thermal conformity. The quartz vials provide alignment between the base and the lid so no additional hardware is required.

NEW! Radiochemistry Reactors

Analytical's New Reactor for Radiochemistry represents a major advancement in providing an apparatus to unlock the potential of High-Throughput Experimentation (HTE) for Radiochemistry applications. Traditionally limited by one-reaction-at-a-time workflows, radiochemical optimization can now benefit from parallel processing—up to 96 reactions simultaneously. Designed to address the time-sensitive nature of radioisotopes, this system supports faster reaction setup, improved workflow, and streamlined analysis – transforming how radiochemistry is performed in industrial and academic R&D settings. Built around industry-standard SLAS formats, making use of Analytical's existing photoredox reactors (for potential photoradiochemistry applications), and compatible with existing automation infrastructure, the Reactor for Radiochemistry opens the door to more efficient discovery, optimization, and scalability in radiochemical synthesis.

- HTE Radiochemistry: 96 reactions
- Addresses time sensitivity of radioactive work
- SLAS footprint
- New Transfer Plate (with novel PFA “webbing” solution) for easy vial transfer
- Full assembly and Conversion Kit available
- Integrates with our Lumidox®II photoredox system

Can be used with:

- Tumble stirrers / hot plates
- Compatible with robotic platforms, has side grooves and standard hex-drive hardware
- Glovebox

Powder Transfer Plate for 8x30mm, 1mL Vials

Easily transfer powder from vial to vial or to mix powders between vials

Cat. No.	Description	Qty
96T105	Powder Transfer Plate for 8x30mm, 1mL Vials	Ea
884001	96-Position Stackable Tray with 8x30mm Shell Vials	Ea

96T105

Use with 96-Position Stackable Tray loaded with 8x30mm Vials (884001)

Flip repeatedly to mix powders between vials

Assembled Vials in Stackable Trays

- For easy loading - **Saves Time!**
- Our thorough QC process ensures **Less Evaporation** compared to loose vials

Recommended for top performance!

Lumidox® II

Photon Generation Devices

For Photoredox Catalysis Applications

Analytical's Lumidox®II devices provide wavelength and power specific illumination to samples for photoredox catalysis applications.

Key Features:

- Reduces photochemical reaction time
- Up to 5 selectable output STAGES
- Up to 17 wavelengths available
- Patented LED array design

LED Output STAGES

By default, all Lumidox II devices are factory calibrated with 5 discrete linearly stepped output STAGES. STAGE 1 output is the least radiometric power while STAGE 5 output is the most. STAGES are calibrated to the nearest whole number of radiant flux, and displayed in milliwatts (mW).

Linear Step (default)

STAGE 1 - 50mW
STAGE 2 - 100mW
STAGE 3 - 150mW
STAGE 4 - 200mW
STAGE 5 - 250mW

High Output (for more aggressive reactions)

STAGE 1 - 100mW
STAGE 2 - 200mW
STAGE 3 - 400mW
STAGE 4 - 600mW
STAGE 5 - 800mW

High Resolution (for greater precision)

STAGE 1 - 100mW
STAGE 2 - 110mW
STAGE 3 - 115mW
STAGE 4 - 120mW
STAGE 5 - 125mW

Low Output (for cell/bio work)*

STAGE 1 - 10mW
STAGE 2 - 15mW
STAGE 3 - 20mW
STAGE 4 - 30mW
STAGE 5 - 40mW

LUMIDOX® II CONTROLLERS

Lum2con

Lumidox®II Controller

- Onboard illumination elapsed timer
- Automatic countdown shut-off timer
- Optional PC control (via USB cable) enables remote controls via python scripting. Example pulsing script available.

Cat. No.	Description
LUM2CON	Lumidox II Controller. Includes: Controller, Power Supply, Power Cable, Manual

NEW! Lumidox® II + 1-Channel and 4-Channel Controllers

New Output Options

- Select from traditional "fixed waveform" (constant) or "modular waveform" irradiation.
 - Features of "Modular waveform"
 - Types of waveform
 - Square wave: on/off cycles (Pulsed light)
 - Sine wave: cyclically brightens and dims ("fading" light)
 - Adjustable: frequency and duration (number of cycles)

Practical Benefits

- Compatible with Lumidox II LED arrays
- Larger color display (new GUI)
 - Visual indication of LED array's wavelength (displayed on border of the channel)
- Front panel connection for LED array (easier to reach)
- LED arrays are now "hot-swappable" / plug-n-play
- Set desired light "dose" in Joules
 - Duration automatically set based on the selected Stage output (mW)
- Simplified API/SDK (serial commands)

Additional Benefits of the 4-Channel Controller

- Conserves bench space: Functionality of 4 controllers in 1
 - No restriction to LED arrays capabilities (max output/duration on all channels)

Peripheral Devices

Lumidox II and Lumidox II + Controllers power **LED Arrays** and **LumLamps**

PRODUCT NOTE:

Arrays and LumLamps are tuned in-house. Calibration STAGE parameters are stored in the LED array or LumLamp. Lumidox II system is modular.

Lumidox® II LED Arrays

U.S. Patent No. 11,458,447

Our patented LED arrays provide wavelength and power specific illumination to samples for photoredox catalysis applications.

- Up to 15 different color wavelengths are available*
- 5 output STAGES (customizeable) with calibration data stored on board**
- Available in two Surface Mat styles
- Three options for Base configurations

* Most LED arrays (excluding Discovery, page 69) are wavelength-specific - only one wavelength per device

** Calibration data is stored onboard (not on the controller), allowing the use of different illuminators with one controller. Controller can only operate 1 device at a time. STAGE settings are NOT user-adjustable and must be configured prior to shipping

* See note on STAGE values on next page.

* Typical calculations performed by Analytical Sales will display 1SD instead of an SD of the radiant flux - not relevant power. This represents the Radiance of the UV, visible, or IR light being emitted by the LEDs.

* Standards represent the electromagnetic radiant flux per unit area (Watts/cm²). Since the radiant emitting area varies from the top of the well to the bottom, the irradiance is simply the radiant flux divided by the circular area of the base (area of the well) or approximated.

Surface Mat Styles

Array top surfaces come in two styles, **Lens Mat** and **Diffuse Mat**.

Lens Mat Surface

- Ultra-clear, molded to fit into the holes of a Para-dox® Reaction Block
- Captures nearly all light emitted by the array's LEDs and directs it into the vials in the reaction block
- Chemically inert silicone

Diffuse Mat Surface

- Flat surface, making for easy pairing with SLAS footprint apparatus
- Can be used for niche applications such as illuminating cell culture flasks, reservoir plates, large scale containers, etc.
- Chemically inert silicone

About Array Cooling and Base Options

Lumidox® II LED Arrays can generate a considerable amount of heat at any output stage and therefore need to be cooled. Both **Lens Mat** and **Diffuse Mat** style arrays are available with an **Active Cooling** or **Solid** base. Each has it's own specific way of cooling the LEDs in the array and can affect different application situations. *Note: solid base arrays are not self-cooling and require the use of a sufficient external chiller/cooling device.*

Array Base Comparison

Active Cooling Base

(underside)

- Self-cooling, no external cooling source required
- Fully conforms to SLAS/ANSI standard dimensions
- Ideal for lower output applications like cell culture and PCR work (*may require special Alignment Spacer*)
- Not compatible with tumble stirrers or devices that generate powerful magnetic fields
- Can be placed in an incubator

Solid Base

TTD+ (connected to chiller)

External cooling source is required (a **Thermal Transfer Deck with a recirculating liquid chiller is recommended**)

- A Thermal Transfer Deck (TTD, see page 71) can be attached to the base when used in conjunction with a recirculating chiller. The TTD can be removed if using a different cooling source, such as a cooling bay
- Fully conforms to SLAS/ANSI standards and can be used with cooling baths, plates, or other cooling chamber (*if NOT being used with our Thermal Transfer Deck and recirculating liquid chiller*)
- Ideal for high output requirements – up to nearly 3x more radiometric power output than Active Base arrays*
- Best highest output, highest intensities

For comparison, Radiant Flux Value charts for Active Cooling Base and Solid Base Arrays are posted on our website.

Note: All LED arrays can operate in an incubator at 37°C, 95% humidity

Discovery/Screening 96-Position LED Arrays

Lumidox®II Discovery LED Arrays for screening offer scientists an economical and efficient way to evaluate most of the wavelengths that the Lumidox II line of products has to offer. Discovery LED arrays come in varying wavelength combinations and are available with an active cooling, solid or flow-through base.

There are currently 15 wavelength options available in the Lumidox II product line. With Discovery LED arrays, 9 of those wavelengths are combined into 3 units (no need to purchase 9 individual units). The three models of Discovery LED arrays come in these wavelength combinations:

- **Discovery 1 (3 UVs):** 375nm, 385nm, 395nm (4 columns of 8 LEDs / wavelength)
- **Discovery 2 (UV405, Indigo, Blue & Amber):** 405nm, 445nm, 470nm, 590nm (3 columns of 8 LEDs / wavelength)
- **Discovery 3 (Cyan, Green):** 505nm, 527nm (6 columns of 8 LEDs / wavelength)

The six remaining wavelengths in the Lumidox II line - UV365, 420-VIOLET, 630-RED, 660-DEEP RED, 730-IR, and White - are not compatible for placement in Discovery LED arrays due to varying electrical conditions. They can, however, be purchased as single wavelength units to complete your LED array collection.

24-Position, 255nm-UVC Arrays for Quartz Vials

Our 255nm UVC wavelength LED Array opens the door to exciting new applications—from high-energy photochemistry to polymer resin curing and surface disinfection—making this one of the most versatile and powerful additions to the Lumidox® lineup.

Because 255nm “light” sits deep in the ultraviolet spectrum, specialized materials are needed to properly transmit this wavelength. Analytical's Engineering team has developed a custom lens solution for the 255nm Array using precision quartz, and have sourced novel quartz vials for samples as they are fully transparent to UVC.

- 24-Well Photoredox Reaction Block for QUARTZ Vials (108240, page 60)

Thermal Transfer Decks

- Must be used with a recirculating liquid chiller or heater
- Can be attached to a Lumidox® II solid base LED array for direct cooling of the array

When connected to an *external* recirculating liquid chiller or heater, our Thermal Transfer Decks can be used as both chilling plates or hot plates. Apply heat or cold directly to your samples or sample vessels (such as Para-dox® Reaction Blocks), or use it to cool your Lumidox II solid base LED array.

Thermal Transfer Decks may be linked in novel ways to form gradients, or to serve other more experimental needs. Push-to-connect fittings allow for quick tubing insertion/removal. Input and Output ports are user configurable, and may be relocated between side and top faces*. Units are shipped with side exit ports as standard. Decks are stack-able, and multiple decks can be chained together for a total temperature control solution. Compatible with a wide variety of coolants (water, propylene glycol, ethylene glycol, etc.).

Lumidox® II for Cell Culture / Biological Applications

We can support your photon irradiation needs for your cell culture or biological applications, such as:

- Photoconverting live mammalian cells with Dendra protein for fluorescent imaging days after photoconversion
- Testing of light-induced toxicity of certain compounds on different cell lines for photodynamic therapy applications
- Studying the photothermal effects of compounds in live cells
- Testing photodynamic therapy of various innovative compounds on live cells
- The use of photodynamic therapy as a type of cancer treatment

Lumidox II LED Arrays with Active Cooling Base

Lumidox II LED arrays generate wavelength specific light for your cell culture or biological experimentation.

- Available in 15 wavelengths from UV, Visible through IR.
- Run at 37°C indefinitely (70°C max) at humidity <=99%.
- Active Cooling Base LED arrays are fully compatible with incubation chambers.
- Use **Lens Mat** Arrays for 24 or 96 well flat bottom collection plates, or with Analytical's 48-well TCR.
- Use **Diffused Mat** Arrays for cell culture flasks, petri dishes, larger 12-well and 6-well cell culture plates, etc..
- Active Cooling Base arrays are recommended for bio/cell culture work, but other base configurations are available.

Cell Culture Plate Alignment Spacers

For Low Output (<50mW) Experimentation

Designed for low output applications using **Lens Mat** arrays (*not compatible with diffuse mat arrays*). **Run your array at a stage with an appropriate output and environment. Higher output levels and temperatures can deform the alignment spacer.** While these Alignment Spacers provide the most practical method for consistent positioning of your samples over the LEDs, if higher output (>50mW per LED) is desired, you can manually position your sample plate over the array without a spacer.

- All our Low Profile collection plates
- Cellvis P96-1.5H-N
- Greiner 655180
- Corning Costar cell culture plates
- Eppendorf cell culture plates (contact us with your specific plate)
- Thermo Scientific Nunc MicroWell plates
- Perkin Elmer ViewPlate (formerly Packard ViewPlate)

Alignment Spacers are available for any standard cell culture plate by request.

Lumidox II Controller

- Five stages of light intensity to choose from that can be calibrated to your custom levels at the time of purchase - [see STAGE settings, page 64](#).
- Controller has an onboard timer to reproducibly limit exposure.

Flow Reactor

The Para-dox® Flow Reactor offers an alternative way to conduct photoreactive research on fluidic samples. Used in conjunction with a Lumidox®II Diffuse Mat Array, wavelength-specific light can be applied to sample fluid circulating through 1/8" OD tubing. The Flow Reactor can be liquid cooled or heated and is highly configurable. Add a Thermal Transfer Deck for a complete flow solution.

Users may configure the Flow Reactor in various ways, including multiple input streams using the machined channels. Tubing can be replaced and installed by the user with a tubing ramp tool.

- SLAS/SBS footprint
- Dripless CPC fittings
- 1/8" OD unions for ease of analyte injection
- User-configurable output/input locations, side or top (factory set to side).
- Exposure volume of 2mL using 1/8" OD, 1/16" ID tubing. The exposure volume may be set to 1mL if two streams are used.
- FEP Tubing Provided
- Cradled design reduces light bleed and helps "seat" and align Lumidox unit
- Compatible with water, glycol based coolants, and silicone based coolants

HTE-Chem Electrochemistry Assemblies

Analytical's new HTE[™]Chem line of products allows for broad electrochemical reactions (such as electrosynthesis, organic electrochemistry, electrophotochemistry, etc.) to be carried out on Analytical's standard 24-well minirack platform. HTE[™]Chem allows you to accelerate your electrochemistry workflow by permitting multiple simultaneous constant current, constant voltage, and/or electrophotochemical experiments to be run.

There are two optimized setups to choose from:

The constant current setup allows the user to set a precise current, which will be maintained by the power supply throughout the reaction. The voltage will automatically be varied based on the changing electrical conditions as the reaction progresses.

The constant voltage setup allows the user to set a precise voltage, which will be maintained by the power supply throughout the reaction. In this setup, the current will automatically be varied based on the changing electrical conditions as the reaction progresses.

Flow Electrolysis

Analytical is pleased to offer a solution for electrolysis experimentation in the form of a standardized flow electrolysis setup. This new and upcoming technology allows for rapid and efficient production of complex chemical compounds via flow electrolysis. With an interelectrode gap smaller than a millimeter, and the introduction of flow geometries that promote turbulent mixing, our Flow Electrolysis Cell allows for heightened selectivity and yield when compared to flask based reactors. Additionally, the Flow Electrolysis Cell requires minimal new equipment to use. With fittings for 1/8" OD HPLC tubing, fluid flow and electrodes can be connected to power supplies via standard connectors will automatically be varied based on the changing electrical conditions as the reaction progresses.

Undivided Cell (single stream)

In an undivided cell, both electrodes are washed with the same electrolyte and only one fluid circuit is used; the opposite side of the cell is sealed with HPLC plugs and an electrode without through-holes. This allows for low-resistance reactions which will output combined products.

Divided Cell (dual stream)

In a divided cell the electrodes and their flow channels are separated by a PFSA Membrane, allowing for reactions to be performed that produce separate output streams. This can be advantageous if the two electrolyte solutions are incompatible or if the products of their reaction are troublesome to separate.

NEW! OWiC SPECS Vials for "Light-Powered" Electrochemistry

SPECS are *THE* way to do electrochemistry at scale. No more wires and racks of electronics. All you need is light. You can run hundreds of reactions in parallel, dramatically speeding up electrosynthesis for drug discovery.

SPECS are tiny photoelectronic devices installed in glass vials. Each SPECS vial uses the light emitted from a Lumidox®II LED array and converts it into electricity inside your sample, creating an electrochemical reaction. SPECS vials make electrochemical synthesis:

- as easy as photochemistry
- highly parallelizable
- fit seamlessly into HTE protocols

Each **SPECS device** is held in place with a press-fit holder (patent pending) to center it, suspend it above the bottom surface of the vial, and protect it from stir bars. The holder is made from chemically resistant polypropylene with no adhesives.

SPECS Vials are available in these sizes:

- 1mL (8 x 30mm) glass vials in a 96-position format
- 4mL (15 x 45mm, 1 dram) glass vials in a 24-position format

Use SPECS Vials in combination with **Para-dox® Reaction Blocks** and **Lumidox®II LED arrays**.

1mL OWiC SPECS Vials

1mL (8 x 30mm) Glass Vials with pre-installed OWiC SPECS

When used with a 96-position Para-dox® Reactor and Lumidox®II LED array, production rates > 3 umol/hr/insert are possible

1mL SPECS Vials are delivered in 96-position racks for easy loading into Para-dox® Reactors. Loading time is literally 5 seconds.

SPECS size: 2mm x 2mm x 0.5mm

Electrodes: Platinum

Holder: 3D printed polypropylene

Current: 20uA per sun of illumination

(1 sun = 1mW/sq mm)

Maximum output voltage: 8 V

Mixing: Compatible with stir bars, orbital shakers, etc.

Usage: Intended for single use for maximum reliability

Library Synthesis

(Fig 3c in Nature 2025)

A library of medicinally relevant heterocycles using the electrochemical dehydrogenate C–H amination of benzoxazoles previously developed by Ackermann and colleagues. This reaction yields 2-aminobenzoxazoles, a structural unit found in numerous biologically active compounds.

Reagent Compatibility

SPECS devices were exposed to various acids and bases for 1 or 20 hours, then washed and tested via the standard TMB assay. Devices remained functional after treatment with TFA, HBF₄, and KOH, but are rapidly degraded by hydrofluoric acid sources.

NEW! Gen II Column Heater Controllers

The **Monocon™** and **Multicon™** are the latest column heater sleeve controllers from Analytical. They are the next generation of the original MonoSleeve™ and MultiSleeve™, and control Analytical's new **Gen II HotSleeve+** column heaters.

- Significant new features include:**
- Touchscreen Interface**
- Provides simple and intuitive interaction with the device
 - Provides greater utility to operators by allowing for gloved operation
 - Tabbed, modern and familiar

- Continuous Display of Critical Performance Data, Including:**
- Current temperature
 - Set point temperature
 - Elapsed time or time remaining until automated cutoff
 - Activation status of heating unit
 - Specifications and parameters of active heaters

- High Power Operation**
- Support for heaters with a temperature range of 5°C above ambient to 130°C
 - Faster heater to-temperature time allowing for decreased downtime
 - Supports 250 W heaters allowing for increased performance and higher capacity operation
 - Supports Peltier coolers

- Screen Lock**
- Prevents accidental touches from changing settings

- Stacking Enclosures**
- Preserves space by allowing multiple devices to share the same 16.5" x 11" vertical footprint

- 1000 Hour Maximum Timer Limit**
- Provides users with the time that they need to collect all necessary data

- USB Connectivity**
- For PC connection

- Modbus RS485**
- Allows the controller to be connected as part of a Modbus RS485 chain. This allows up to 31 controllers to be used simultaneously.
 - A list of Modbus serial commands is available

Touchscreen Interface

IMPORTANT: Gen II HotSleeve+ and AgileSleeve+ heaters can only be used with Gen II controllers (Monocon or Multicon)

NEW! Gen II HotSleeve+ Self-Calibrating "Smart" Column Heaters

The **Gen II HotSleeve+** is the second generation of the HotSleeve+ column heater, and the third iteration of the original Hot Sleeve. Use with either the **NEW MULTICON™** Gen II multiple heater controller or the **NEW MONOCON™** Gen II single heater controller, sold separately.

- Inner diameter: 0.65" – Improved internal geometry accommodates a superior fit for analytical columns
- Models designed to fit columns ranging from 5cm to 30cm long
- Temperature range: 5°C above ambient to 130°C
- Robust, high temperature VELCRO® fastener provides superior performance when compared to Gen I HotSleeve+ snap fasteners

NEW! Gen II AgileSleeve+®

The Gen II AgileSleeve+® is the second generation of the AgileSleeve+ column heater, and the third iteration of the original AgileSleeve.

Heats to twice the temperature of Gen I AgileSleeve+ (200° vs 100°C)!

AgileSleeve II slides over a small diameter capillary column, nanospray line, injector line, or pre-column line before the end fittings are attached. This flexible heater provides a quick response, using our well-established **Multicon/Monocon** controller technology, providing a controlled temperature range from 35°C to 200°C. It is available in a variety of lengths up to 100cm, with an ID of 1/16".

MonoSLEEVE™ Controller

- Self-calibrating
- Plug & Play smart heater technology
- Temperature range from 25°C to 85°C
- Controller comes with Power Supply, USB Cable, GUI Software and Manual.

MonoSLEEVE is the second generation of the original Hot-Sleeve controller. With it's advanced "Plug & Play" technology, MonoSleeve can accommodate single HotSleeve+™ * or AgileSleeve+® * column heaters of different sizes without having to recalibrate to each individual sleeve. This allows you to switch out different heaters on the fly.

Cat. No.	Description
MonoSLEEVE	Single Column Heater Controller (heater not included)

MultiSLEEVE™ Controller

- Controls up to 4 column heaters simultaneously
- Self-calibrating
- Plug & Play smart heater technology
- Heats capillary Columns, N₂, sheath gas lines, etc.
- 4 independent channels
- Used in multiplexing applications
- Temperature range from 25°C to 85°C
- Controller comes with cables, manual and USB GUI software.

The MultiSLEEVE controller is used for applications which require multiple heating zones or multiple LC system heating. Used in conjunction with HotSleeve+™ * and/or AgileSleeve+® * heaters it maintains four independent channels simultaneously and accurately while reducing overall equipment costs.

TECH TIP:

A temperature fluctuation as little as 2°C in either direction is enough to adversely effect the performance of even the most tried and true methods. HotSleeve+ and AgileSleeve+ heaters are accurate to within ± 0.1°C, ensuring optimum performance.

* HotSleeve+ is the "smart" version of the original HotSleeve. AgileSleeve+ is the "smart" version of AgileSleeve. **Note: MonoSLEEVE and MultiSLEEVE will only accept HotSleeve+ and AgileSleeve+ heaters.**

CE All Analytical Sales and Services, Inc. heater products carry the value recognized CE mark. Each heater meets the demanding electromagnetic emission standards of the new European Union Directives, United States standards, and Canadian standards.

HotSleeve+™

Column Heater

- Self-calibrating
- Temperature range from 5°C above ambient to 85°C
- Accommodates HPLC columns up to 30cm in length
- Available in 5/10/15/25/30cm lengths, as well as Prep & Semi-Prep sizes
- Tube style design: Unsnap for easy column insertion & removal

A temperature fluctuation as little as 2°C in either direction is enough to adversely effect the performance of even the most tried and true methods.

The HotSleeve+ is a self-calibrating "smart" heater that utilizes "Plug & Play" technology. This technology eliminates error generated when switching heaters from one system to another. It incorporates a unique "Tube Style" design which encapsulates a single HPLC column up to 14" in length.

The HotSleeve+ replaces the original Hot Sleeve column heater. Use with either the MultiSLEEVE™ controller or the MonoSLEEVE™ controller only, sold separately.

AgileSleeve+®

Flexible Capillary Heater

- Self-calibrating
- Accurate from 5°C above ambient to 100°C
- Heat lines up to 30cm long, with ODs of 1/32" or 1/16"
- Great for small diameter analytical columns, nanospray, injector or pre-column mobile phase lines

AgileSleeve+ slips over a small diameter capillary column, nanospray line, injector line, or pre-column line before the end fittings are attached. It is available in a variety of lengths up to 60cm, with IDs of 1/32" or 1/16". Each is color-coded for quick diameter identification.

AgileSleeve+ replaces the original AgileSleeve heater and uses "smart" Plug & Play technology. Use with either the MultiSLEEVE™ controller or the MonoSLEEVE™ controller only, sold separately.

Cold Sleeve™
Column Cooler/Heater

Cold Sleeve™ is a Peltier driven cooler/heater designed to hold a single column up to 30cm long and up to 7.8mm in diameter. The temperature range is 5° to 55°C with 0.2°C accuracy. A double insulated cover maintains temperature stability within the chamber ± 0.2°C. The high performance control unit incorporates state-of-the-art electronics with dual remote preset temperatures for advanced methods development work. RS232 control is standard.

- For chiral applications

Cat. No.	Description
ColdSleeve-30	Column Cooler/Heater, Includes Cool/Heat Module, PTC-050CS 24V Control Unit, Cables and Manual

CE All Analytical Sales and Services, Inc. heater products carry the value recognized CE mark. Each heater meets the demanding electromagnetic emission standards of the new European Union Directives, United States standards, and Canadian standards.

PRODUCT NOTE:

The Temperature Control Module is custom designed to offer optimum performance in heating applications. It has fast 100Hz sampling that improves control responsiveness, variable time base burst firing that increases the heater life and gives better temperature controllability, and a compact size which allows it to be placed in small areas.

Thermal Adapter Plates

- For improved temperature transfer to samples
- For use with matching polypropylene collection plates

Our Thermal Adapter Plates conform to the well shape of their complementing polypropylene collection plate. They ensure uniform thermal transfer for heating and cooling when used in conjunction with a heating block or chiller (not included). The plate features a SLAS footprint and easy to identify purple anodized coating.

Analytical can make Thermal Adapter Plates to accommodate any shape and style polypropylene collection plate we offer. Please call 973-616-0700 for more information.

Adjustable Pre-Column Flow Splitters

Analytical Range - 0.1-1mL/min Incoming Flow

These splitters will produce under 3500 PSI back pressure with water at 0.5mL/min

Pre-Column splitting is used for micro, capillary and nano HPLC applications. The split ratio created by the splitter valve will remain constant. However, when an HPLC column is installed, there will be added resistance on the flow rate channel. This added resistance must be considered to ensure the fluid resistor selected for the flow splitter provides the correct split ratio.

Please provide the column flow rate and back pressure specifications. If these specifications are not provided, the pre-column flow splitter will be configured assuming a 0.5mL/min inlet flow rate and a pressure drop across the column of 1500psi.

Cat. No.	Description	Qty
60-104	Adjustable Pre-Column Splitter, Split Ratio Range 5:1-100:1	Each

Adjustable Semi-Prep Flow Splitters, Post Column

Analytical Range - 5.0 - 40mL/min Incoming Flow

Cat. No.	Description	Qty
62-315	Adjustable Splitter, Stainless Steel, Ratio 1:1-20:1	Each

62-316	Adjustable Preparative Splitter, Stainless Steel	Each

Fixed Binary & Multiport Flow Splitters

For Post Column Applications

- Fixed metering for precise control
- Fluid resistor technology
- Split ratios from 1:1 to 20,000:1
- Low dead volume
- Rugged stainless steel design

Advantage™ Fixed Flow Splitters are shipped with resistors installed that deliver the nominal stated split ratio. The split ratios have a tolerance range of ±10%. The exact split ratio is measured and is stated on the certificate shipped with the splitter. The input flow rate can be adjusted to compensate for the tolerance in split ratios. For instance, a 10% increase in input flow rate will result in a 10% increase in flow at both the capillary and waste stream channels. Flow rate and viscosity changes will change the back pressure generated by the splitter, but will not affect the actual split ratio.

These Fixed Flow
Splitters are ideal for:

- LC/MS
- Flow fractionation
- Column flow splitting
- Capillary chromatography

Split Ratio =
$$\frac{\text{Inlet Flow} - \text{Low Flow}}{\text{Low Flow}}$$

Model 63 Binary Fixed Splitter, with its interchangeable fluid resistors, eliminates the need to cut capillary tubing to change the split ratio. Split ratios can be changed by replacing the resistor set.

Model 53 Multiport Fixed Splitter is ideal for applications that use multiple detectors and/or a fraction collector.

Selecting the Right Size Mixer Cartridge

Analytical Sales and Services, Inc. offers static mixers with volumes that range from .05 μ L to 1.5mL. Choosing the right size is a trade-off between delay volume, mixing noise, and step gradient definition and repeatability.

- For any given flow rate, the more the mixing volume the better the mixing, and the lower the baseline noise.
- The smaller the mixing volume, the better the definition and sharpness of step gradients.
- Multi-pump gradient systems typically require far less mixing volume than low pressure single pump gradient systems.
- A 150 μ L inline static mixer can be added after a dynamic mixer to further reduce mixing noise.

Multi-pump High Pressure Gradient

Linear Gradients

Larger mixing volume can be tolerated for a particular flow rate, whereas the larger the volume, the lower the mixing noise. The upper limits to mixing volume will be the maximum delay time that can be tolerated, and possible distortion (tailing) of the gradient at the beginning and end of the gradient. The lower limit will be defined by the amount of mixing noise that can be tolerated. (See chart for specific recommendations)

Flow Rate (μL/min)	Mixer Cartridge Volume (μL)
0-5	5
5-10	10
10-20	25
20-150	50
15-500	150
500+	250

Binary or Ternary- Steady State Composition

Always select the largest volume that will still provide an acceptable delay volume. In general, the more mixing volume, the better the mixing will be. For most pump systems, a 150µL cartridge will provide adequate mixing.

Examples of this type of pump system include:

- Shimadzu® 10 AD and 10 ADVP
- Beckman System Gold®
- Gilson® Model 305
- Hewlett Packard® Model 1100

Single-pump Low Pressure Mixing Gradient Systems

Linear Gradients

These systems generally require more mixing volume to perform linear gradients than multi-pump high pressure systems. This is because in a low pressure system, the composition can only be changed once every pump stroke. Since the pump stroke volume of most pumps is 100 μ L, and it takes a mixer volume that is about 3 times the batch volume to provide adequate mixing, we need a minimum of 300 μ L of mixer volume to do adequate mixing. More insoluble combinations may require even more mixing volume.

In general, choose the largest size mixer cartridge that will still provide an acceptable delay volume. For most applications this will be at least 350 μ L.

Binary or Ternary - Steady State Composition

Always select the largest volume that will still provide an acceptable delay time. In general, the more mixing volume, the better the mixing will be. For most applications this will be at least 350µL.

PRODUCT NOTE:

Use low volume (smaller than 50µL) static bed mixers for all your ballistic gradient applications. Smallest internal volume maintains gradient precision and accuracy.

Safety Waste Caps with Exhaust Filters

Exhaust Filter
Contains an activated carbon, multi-component granulate material which absorbs 99% of all vapor and particulate materials evaporating from your solvents.

PTFE Body
Rotates freely within the screw cap (until tightened) allowing for easy removal of cap without twisting or tangling tubing lines.

Viton® O-ring
Ensures air-tight seal between cap and mobile phase bottle

Exhaust Filters

Canary-Safe exhaust filters contain an activated carbon, multi-component granulate material which absorbs 99% of all vapor and particulate materials evaporating from your solvents. Filters come with a **Timer/Change Indicator** at no additional cost.

Exhaust Filter Adapters for JustRite® Waste Containers

Cat. No.	Description	Qty
CJX01	Exhaust Filter Fitting/ <i>Long</i> Adapter for Stainless Steel Port on JustRite Waste Container	Each
CJX02	Exhaust Filter Fitting/ <i>Short</i> Adapter for Gray PEEK Port on JustRite Waste Container	Each

JustRite® Waste Containers

Ideal for HPLC waste applications:

- Vapor and fire protection
- Safeguard against accidental spills
- Maximize safety and convenience

Hands-free solvent collection: Solvent flows freely from your process into the container through tubing making it suitable for either pump-fed or gravity-flow HPLC waste methods. Two disconnect fittings, one intake and one vent, eliminate back pressure in liquid flow disposal line and provide controlled handling of vapor.

Solvent Safety Alarm System

- Monitor up to 3 containers (**Waste and/or Mobile Phase**) at the same time
- Sensors can be set to detect **FULL or EMPTY** fluid levels
- Front panel LEDs indicate which sensor position has been activated
- Beacon light illuminates to signify fluid level status:
Green=Safe, **Red**=Alert!, **Orange**=Alert with audio alarm paused*
- Adjustable audio alert

Cat. No.	Description
Sentinel	Solvent Safety Alarm System, Includes Control Module, Beacon and 3 Sensors

A sensor can be set to detect low fluid level in your mobile phase container.

Another sensor can be set to detect high fluid level in your waste container.

The Beacon turns from **green** to **red** and an audio alert sounds when a level has been reached (full or empty, depending on setup).

See full operation on website

- Includes fittings for 1/8" tubing

Multi-Inlet Waste System Manifold

Keeps solvent waste lines neat and organized!

- Made of durable chemical-resistant polypropylene
- Fits bench up to 3" thick
- Includes fittings and barbed adapters

Remediates these waste solvent situations:

Precision MSQ™
(Mass Spec Quality)

Why Precision MSQ is the best choice:

Vials made with standard glass contain impurities which can leach into your sample. This can change the pH level of your sample and ultimately alter the accuracy of your results.

Precision MSQ Vials are made with the purest materials under the strictest mandates for cleanliness right here in the United States. Less impurities in the glass means less alteration of your sample and far more accurate results.

Precision MSQ Vials & Caps in Unassembled Kits

- Kits contain (100) 9mm, 2mL unassembled vials/caps
- Cases include 10 boxes of 100 vials/caps
- Ultra pure MSQ PTFE/silicone liners
- Screw thread or snap closures available
